ABDUL HADI

Full Stack Developer

Python · Django · FastAPI · Node.js · React.js · Next.js · TypeScript · PostgreSQL · AWS · Docker · AI/LLM Integration

hadi27767@gmail.com | +92 313 7707410 | linkedin.com/in/abdul-hadi-aaa6001b0 | github.com/Abdulhadu

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of professional experience building and shipping production-grade web applications using Python and Node.js backends with React.js and Next.js frontends. I have shipped 6 live production systems that are used by real people every day, with zero prototypes in the mix. Strong background in REST and GraphQL API design, microservices, multi-tenant SaaS backends, RAG pipelines, relational and NoSQL databases, JWT and OAuth2 authentication, RBAC, cloud deployments on AWS and Azure, Docker, and Kubernetes. Currently integrating AI and LLM features into production systems using LangChain, OpenAI API, and vector databases like ChromaDB and Qdrant.

CORE TECHNICAL STACK

Python Stack	Python, Django, DRF, FastAPI, Flask, Celery, asyncio, Gunicorn, Nginx
MERN Stack	MongoDB, Express.js, React.js, Node.js, Mongoose, Middleware, JWT
Frontend	React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3, Redux, Axios
Databases	PostgreSQL, MySQL, MongoDB, Redis, Supabase, ChromaDB, Qdrant — ORM, schema design, query optimisation
Auth & Security	JWT, OAuth2, OIDC, RBAC, Bcrypt, payload encryption, rate limiting, API hardening, CORS
Cloud & DevOps	AWS (EC2, S3, Lambda, DynamoDB, CloudFront), Azure, Docker, Kubernetes, Kafka, CI/CD, GitHub Actions
API Design	RESTful APIs, GraphQL, Async APIs, WebSockets, Django Channels, Webhooks, Swagger/OpenAPI
AI & GenAI	LangChain, OpenAI API, RAG pipelines, vector DBs (ChromaDB, Qdrant), NLP prompt engineering, LLM fine-tuning
Testing & Tools	pytest, unit testing, automated test suites, Git, Postman, Docker Compose, ESLint, Agile, Scrum

LIVE PORTFOLIO — 6 SHIPPED PRODUCTION SYSTEMS

Vopple — Automotive SaaS Ecosystem (Flagship) | *vopple.com/Dashboard*

Python · Django · React.js · TypeScript · Next.js · PostgreSQL · Kafka · Redis · Kubernetes · Docker · AWS

- Architected a three-product full-stack ecosystem covering a Dealer Portal, Consumer Community, and Mobile App using Django REST Framework on the backend and React.js TypeScript on the frontend
- Each dealer tenant runs on its own PostgreSQL schema with full data isolation at the database level and Kafka handling event communication between services
- Built Celery and Redis async workers for background jobs, content publishing, analytics ingestion, and notification pipelines with retry logic and error handling
- Implemented OAuth2 and JWT RBAC across three role hierarchies with encrypted payloads, rate limiting, and API hardening on all endpoints
- Deployed on Kubernetes and Docker on AWS EC2 with CI/CD pipelines and GitHub Actions so the system scales horizontally under real traffic
- Integrated a Generative AI pipeline using LLM APIs for video transcription, theme generation, and automated social publishing

BNTR.AI — Multi-Tenant AI Agent SaaS | *bntr.ai*

Python · FastAPI · React.js · PostgreSQL · Redis · LangChain · OpenAI API · ChromaDB · Docker · AWS

- Built a full-stack multi-tenant SaaS platform where businesses deploy custom AI agents trained on their own knowledge, with a FastAPI backend and React.js SPA frontend
- Each tenant gets a completely isolated PostgreSQL schema and token-based API access with JWT auth, RBAC, and payload encryption on every endpoint
- Integrated LangChain and OpenAI API with a RAG pipeline that pulls from five knowledge source types including PDFs, websites, plain text, structured data, and documents

- Celery workers handle async knowledge ingestion and document processing pipelines, with retry logic and dead-letter error handling for failed jobs
- Used S3 for document storage, Redis for caching, ChromaDB for vector search, and Docker for containerisation with AWS cloud deployment

MotorCut — Full Stack Automotive Marketplace | *motorcut.com*

Python · Django · React.js · TypeScript · PostgreSQL · Node.js · REST APIs · AWS S3 · Docker

- Built a complete full-stack automotive marketplace with a Django REST Framework backend and React.js TypeScript frontend, with AWS S3 for media storage and CloudFront for delivery
- Designed the PostgreSQL schema with complex multi-table joins, query plan optimisation, and index justification for high-volume listing queries
- Integrated a GPU inference API from RunPod for AI-powered car image processing, with an async API layer that handles concurrent requests at production scale
- Secured all endpoints with production-grade authentication, request validation, and rate limiting

PrimeDealStore — Multi-Seller Dropshipping SaaS | *primedealsstore.net*

Python · FastAPI · React.js · Supabase · PostgreSQL · REST APIs · RBAC · Docker

- Architected a multi-seller backend where each seller gets their own isolated data layer, regional profit-margin logic, and Supabase-backed PostgreSQL
- Built REST APIs with encrypted payloads, RBAC, and rate limiting, and managed live database migrations without taking the system down

SPIE.org — AI Detection SaaS (Azure Cloud) | *spie.org*

Python · Flask · Node.js · Azure · REST APIs · JWT Auth · PostgreSQL

- Deployed a cloud-based AI detection SaaS on Azure with a Flask backend, JWT custom auth, RBAC, encrypted payloads, audit history logging, and rate limiting
- Integrated AI model APIs for Steel Plate and Camera detection with environment management per project and a query-optimised PostgreSQL database

ManzilOS — Personal Career Copilot (Active Build) | *github.com/Abdulhadu/ManzilOS*

Next.js · FastAPI · Python · TypeScript · AI Agents · Vercel · Personal Project

- Building a personal career copilot where the CV lives as structured data, an AI coach monitors the job market, and an agent writes fully personalised job applications from scratch
- Next.js frontend on Vercel and FastAPI Python backend as serverless functions, with two complete design systems (Void and Daybreak) already shipped
- The agent layer reads the candidate profile and generates contextually tailored cover letters and CVs with no template reuse, so every output actually knows the person applying
- Monorepo structure with apps/web for the frontend, apps/api for the FastAPI backend, and a docs folder covering architecture, milestones, and design specs

PROFESSIONAL EXPERIENCE

Full Stack Engineer (Backend Extensive) | ZenCloud Technologies | *Jul 2026 – Present* | *Kazani Heights · On-site*

- Building full-stack applications using React, Next.js, and Tailwind on the frontend with Python (Django, FastAPI, Flask) and Node.js on the backend
- Developing REST APIs, GraphQL APIs, and Async APIs with databases including MySQL, PostgreSQL, MongoDB, ChromaDB, and Qdrant vector databases
- Designing and shipping production RAG pipelines covering ingestion, embedding generation, retrieval, and LLM response generation
- Integrating LLM and AI model APIs, handling fine-tuning workflows, and building prompt engineering pipelines for domain-specific use cases
- Building Python and Node.js web scrapers for automated data extraction pipelines that feed downstream AI workflows
- Writing automated unit test suites and managing CI/CD pipelines for continuous testing and deployment

Full Stack Developer / Python Backend Developer | CortechSol | *Oct 2024 – Jun 2026*

- Designed, developed, tested, and maintained full-stack web applications with Python on the backend and React.js and Next.js on the frontend
- Built and maintained RESTful APIs and microservices with clean, well-documented code following Agile workflows and code review practices
- Designed PostgreSQL schemas, wrote complex ORM queries, optimised query plans, and managed backward-compatible live migrations

- Handled JWT and OAuth2 authentication, RBAC, payload encryption, rate limiting, and API security hardening across all production systems
- Deployed to AWS EC2 and Azure using Docker and Kubernetes, set up CI/CD pipelines and GitHub Actions workflows
- Integrated Generative AI services including LLM APIs, RAG pipelines, and OpenAI integrations into backend systems

Junior Python Backend Developer | Lucrum ERP | *Jul 2023 – Oct 2023*

- Led Python and Flask backend development for an ERP system covering REST API design, PostgreSQL database integration, and clean code standards under review
- Built RESTful APIs for cross-module data communication using Git version control and collaborative development practices

Full Stack Web Developer (Freelance) | Fiverr / Upwork | *Oct 2020 – Present*

- Delivered full-stack web applications using Python, Django, Node.js, Express.js, React.js, Next.js, and MongoDB for international clients across MERN and Python stack projects
- Three-plus years of independent async remote delivery with strong written English and the ability to work without supervision across time zones

EDUCATION

BS Computer Science | University of Chakwal | CGPA 3.66 / 4.0 | Graduated August 2024
